Customer Journey Map

The Customer Journey Map illustrates how different users interact with the Heart Disease Analysis system, from identifying their needs to gaining insights through dashboards. It helps in understanding user behavior, expectations, and touchpoints, ensuring the solution is designed to deliver maximum value.

1.1 User Personas

The system primarily serves three categories of users:

- Healthcare Professionals (Doctors, Analysts)
- Government & Policy Makers
- Individuals & Patients

Each persona has different goals, but all rely on data-driven insights to make informed decisions.

1.2 Stages of the Customer Journey

Stage 1: Awareness

At this stage, users recognize the need for data insights.

- Doctors want to analyze patient risk factors
- Policymakers need trends for public health planning
- Individuals want to understand personal risk

User Need: Access to reliable and visual health insights

Stage 2: Exploration

Users begin interacting with dashboards and reports.

- Filtering data by demographics
- Exploring trends and comparisons
- Identifying correlations

Touchpoints: Tableau dashboards, reports, analytics interface

User Need: Easy navigation and intuitive visuals

Stage 3: Insight Generation

Users interpret visualizations to draw conclusions.

- Doctors identify high-risk patients
- Policymakers analyze regional patterns
- Individuals compare their health indicators

User Need: Accurate and actionable insights

Stage 4: Decision Making

Based on insights, users take action.

- Doctors recommend lifestyle changes
- Government designs awareness programs
- Individuals adopt healthier habits

User Need: Clear recommendations supported by data

Stage 5: Outcome & Feedback

Users evaluate the effectiveness of decisions.

- Improved patient care
- Better policy outcomes
- Increased health awareness

User Need: Continuous monitoring through updated dashboards
