Ideation Phase
Brainstorm & Idea Prioritization Template

Date	1 March 2026
Team ID	MBA-041
Project Name	Heart Disease Analysis using Tableau
Maximum Marks	4 Marks

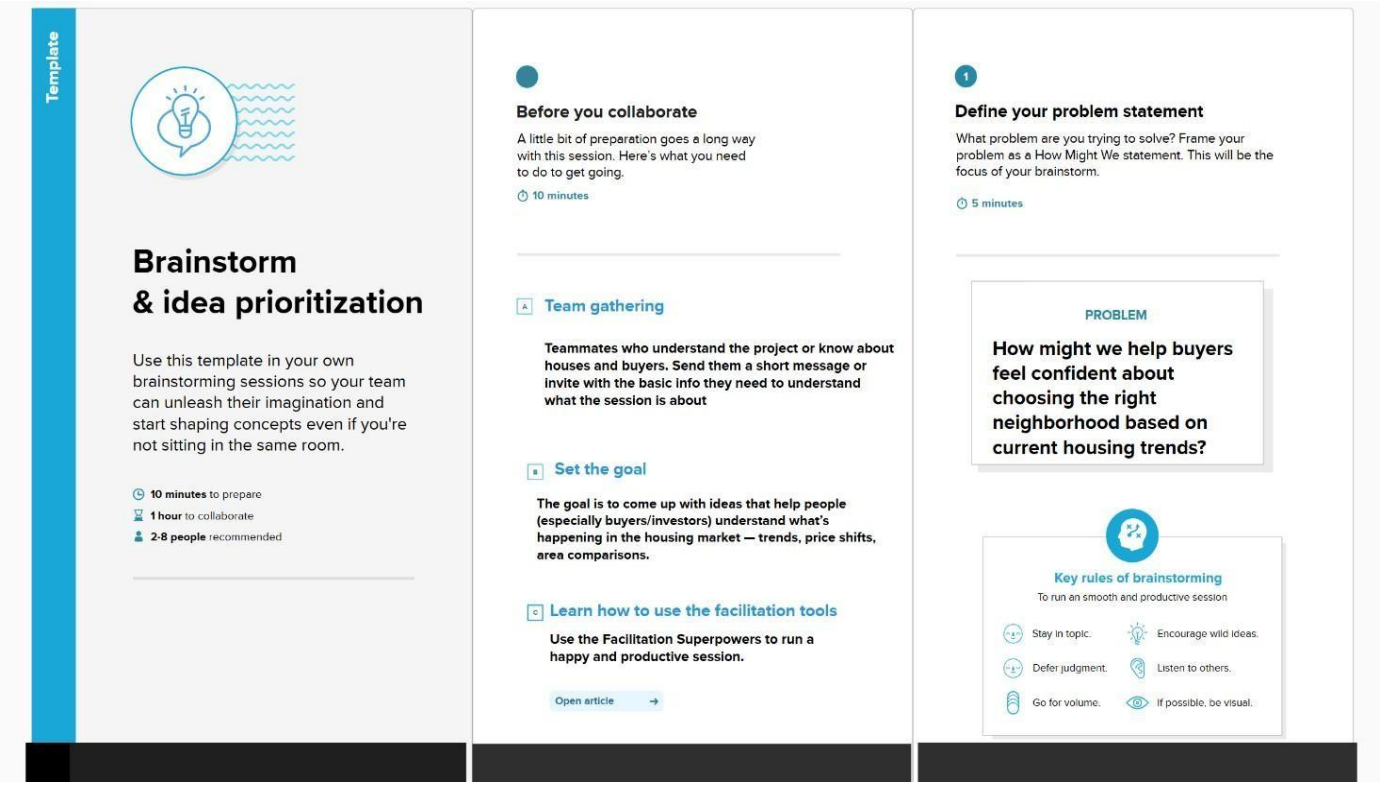
Brainstorm & Idea Prioritization Template:

Brainstorming is a crucial step in the ideation phase, as it helps identify potential solutions, define project direction, and explore various analytical perspectives. During this stage, different ideas were evaluated to determine how data visualization could best address the problem of heart disease risk analysis.

1 Identification of Key Objectives

The brainstorming process began with defining the primary goals of the project:

- Understand the major risk factors contributing to heart disease
- Identify correlations between lifestyle habits and cardiovascular conditions
- Compare disease prevalence across demographic groups
- Provide actionable insights through interactive dashboards
- Enable stakeholders to make data-driven decisions

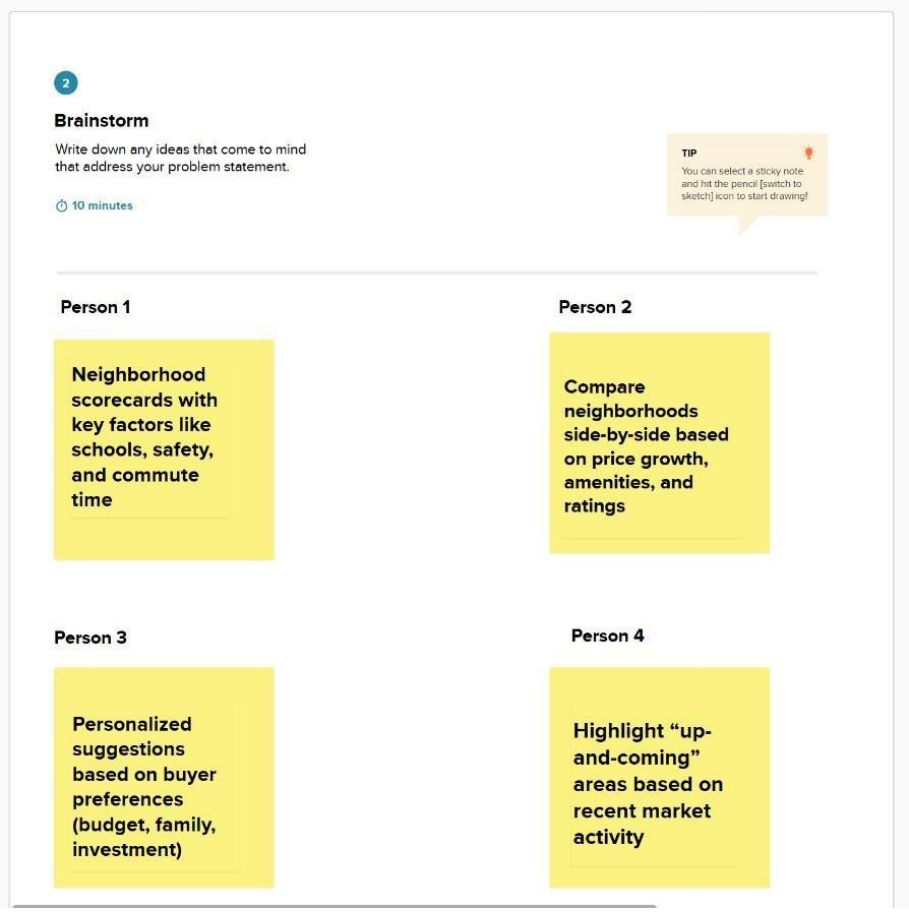


2 Exploration of Data Attributes

Several data attributes were considered important for analysis:

- Demographic Information: Age, Gender, Race
- Lifestyle Factors: Smoking habits, Alcohol consumption, Physical activity
- Medical Indicators: BMI, Diabetes status, Stroke history, General health
- Outcome Variable: Presence or absence of heart disease

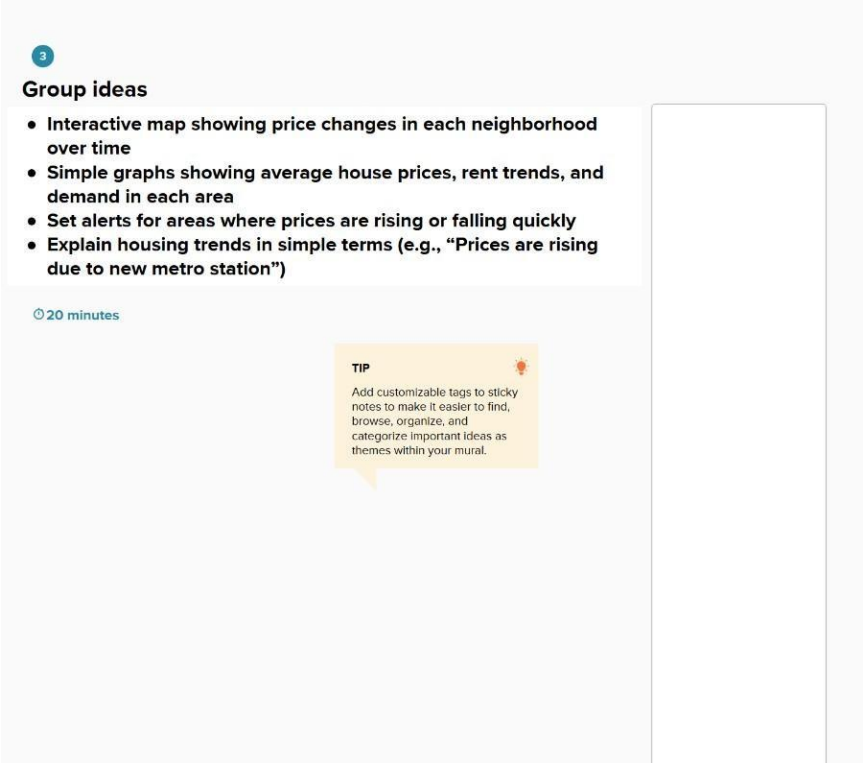
Analyzing these attributes together allows a comprehensive understanding of how multiple factors interact to influence heart disease risk.



3 Visualization Ideas

Different visualization techniques were discussed to effectively represent the data:

- Bar Charts to compare heart disease prevalence across gender and race
- Line or Trend Charts to analyze age-related patterns
- Scatter Plots to explore relationships between BMI and diabetes
- Heat Maps to highlight intensity of risk factors
- Comparative Charts to study the impact of smoking and alcohol
- Dashboards combining multiple visuals for holistic insights



4 Stakeholder Perspective

The brainstorming phase also focused on understanding how different stakeholders would use the insights:

Doctors need patient-level insights to identify high-risk individuals

Government agencies require regional and demographic trends

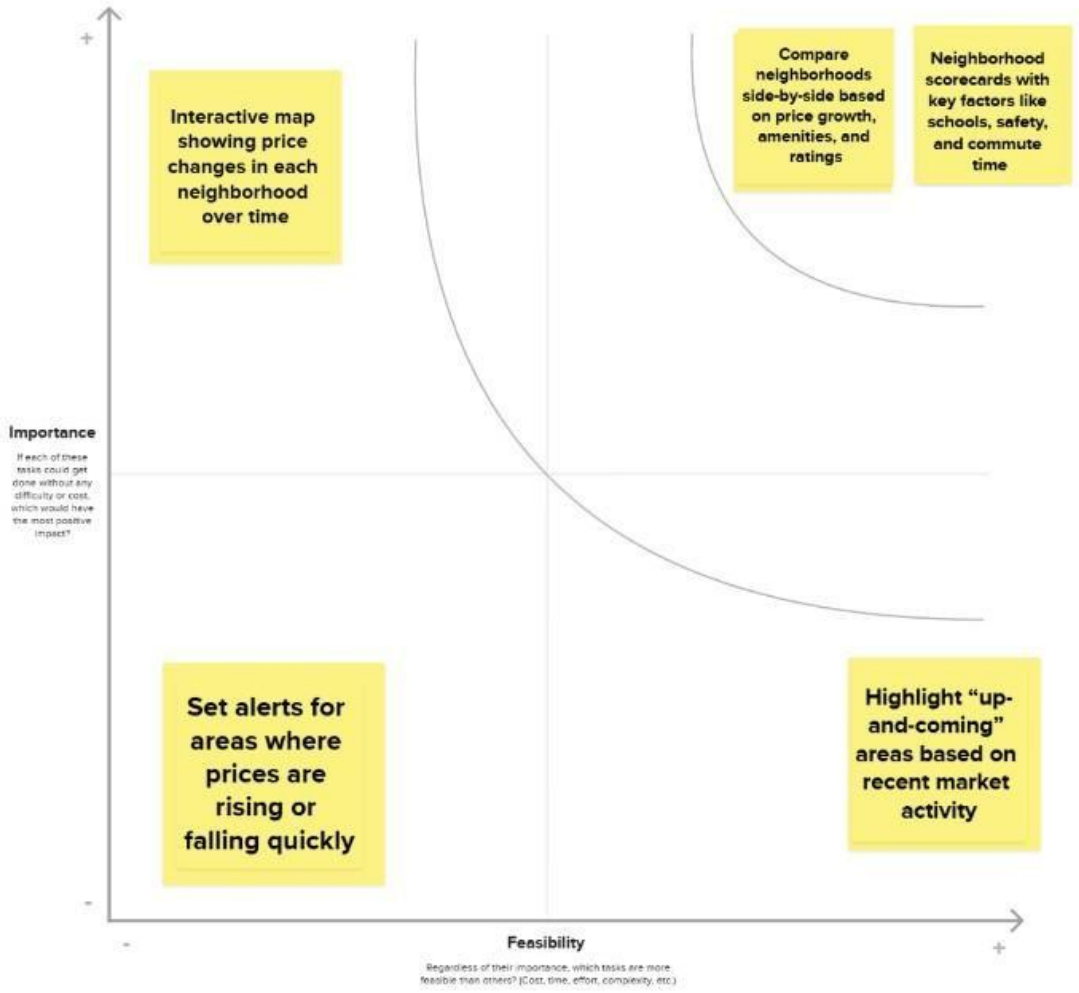
Individuals benefit from simplified visualizations showing personal risk factors

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes

TIP


Participants can use their cursors to point at where sticky notes should go on the grid. The facilitator can confirm the spot by using the laser pointer holding the **H key** on the keyboard.
